while I think so , I will pass verification and accreditation on coingeco the other day, I will add myself to uniswop, maybe poloneix still, so that the point 0.0017 USD is fixed on the chart. I will gradually sell the token through uniswop, later maybe other exchanges.

but! don't buy my token if you are a speculator. it's not a purchase, it 's an investment. later on my exchange, I will be fined for early exit, or take interest. and I will track all speculators on etherscan, and later I will apply sanctions. you break the chart when it sells tokens. bought zybyli this approach. the nearest target is the price of the cue ball. why I think so chat re-read. tell me what's behind the cue ball and what's behind my token. the next iteration is an accelerator of transactions in the bitcoin network up to instant. that's why he's on correction now maybe where I'm from I know exactly.

once again, do not buy my token if you are a speculator, leave the chat and bye. uniswop will be a small party, as a thank you for being here and helping to come up with everything. and I will sell the main batches of the token to large investors, physicists and yuriks, each time adding a new one to the price of the token 0.

each new sale is a multiplication

each new sale is a multiplication of the investment for the previous investor by 10 and so on indefinitely. if you decide to sell, call me and sell to me. sold - don't buy my token ever again. such rules. small packages can be sold if you need money. I tested the tactic it works. you just need to invest the money that you are ready to invest for a couple of years at least. in a couple of years, you can sell the token, let's see where it will be)) so I'll show you what a graph without corrections.

the next debut on the exchange is my work on the topic of defi or coin other. and maybe there will be something else in front of him. don't know. all according to the mood. but!

it is not a fact that I will sell the token to a specific large investor, and in general, I will not sell it to everyone. I will sell only to those who I like or in whom I see a partner for further development.

something like this (😊)

changed 01: 14 //

the site is almost finished the second iteration, there are cosmetic edits tomorrow

Today

the entire twenty-one million tokens go to the market, I don't leave anything for myself. what the fuck? if the investment is in exchange for the exchange . I don't understand those who keep something for themselves. in parallel, I will sell my GIFs on rari and later on other nft marketplaces - money from sales to those who worked on the project, to myself, freelancers, game copyright owners-for life, and after their children, and after them. this approach. the money from the token is all mine and will be used for further development. there are many plans. what kind of books do you read whitepaper, I'll drop it later.

changed 01: 20 //

the fact that you bought a large package of tlens does not give you the right to influence the development

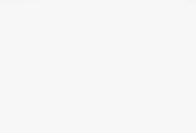

of the project. first I will see that you are able to generate ideas as well as I do, or maybe less but better, then yes. I am for such topics, and so all the bed solutions are always for me and the company is one hundred percent it's mine.

I took the responsibility to create a culture of investment as above read four to five days above, the functions of the market maker, the depository and the regulator to clean up the trash. and then until now , no one has shown a split in the crypt market, the chip is a million and everything is all in toys are playing. we've played enough.

the investment has arrived.

the idiots of the release of the product and even the targets on it say, buy at random will be called. I plan to go the way 0. 0017\$ -> 50000\$> and fast. I have no idea how fast.

why everyone is in the chat.

01:25 //

well, the cue ball will be much higher than the current ones, of course, as transactions will become instant. not for the fork. the accelerator will go to the cue ball on github for free. so I will show the idiots to the blockchain teams, of which there are more than eighty thousand, that they are cretins and they need to unite and reveal each other's technologies in order to reduce development and marketing costs. everything is based on partnerships.

01:27 //

I don't like the ether network, I believe in the throne more. although there may be some technology behind the ether, I have no idea I'm not an expert. I know a little bit of everything. the experts will tell me that later. but I believe that the ether is a scam in its purest form.

I would put a super computer vitalik and there is no network overload and similar price tags for transactions.

my immediate task is a quantum computer or bigdata center scattered across different countries where mining is available. governments make electricity more affordable, get a percentage of mining for it. not taxes, but the percentage of wines I call wines.

01:30 //

all tokens will be mined on mine

all tokens will be mined on my computers before entering the exchange. as with the NFT cosmos crypyography project. stop buying video cards and breaking their prices. if you want, buy a stablecoin mining token and get your fix every day or a couple of weeks until you decide, but I came up with this. I also came up with the battle of miners. if you rummage in the servers send tk, we will buy and collect a server for you, we will issue you a token and you will see how cool you are in comparison with other tkshniki.

01:33 //

the key seems to have written, I will remember what else I will add 😊

01: 33 //

I sent you the documentation for a library written in python that implements ENS

19:46

The Ethereum Name Service is analogous to the Domain Name Service. It enables users and developers to use human-friendly names in place of error-prone hexadecimal addresses, content hashes, and more.

19:47

| zhenya kosmos
| https://app.ens.domains/search/ggffrdg

as I understand it, you can use it to implement what is implemented on this website

19:47

so in other words, the task is feasible. what resources do we need for this?

20:12 /

hi, irishka 😊

20:12 //

I will dig into the documentation and configure this algorithm on my laptop - I will check it

20:21

almost found a way to legally regulate top-level domains without ICANN, the fuck is all interesting so-and-so))

in fact, this is a hub created to make friends with the crypt and the p...

or don't buy the cue ball now, I don't need it

no difference at all

the main thing is that I want everything to be realized this

is an obligation I think

01:53 //

cryptоженя

if something above is not clear, ask questions

if I find the question idiotic, I reserve

the right not to answer it, just as

in whitepaper something will seem

incomprehensible, I did not read it at all, only

I set the task to create everything

in the chat so-that is ,

not the rules of the old exchanges, so I would

not do it at all

it's an empty waste of time

and interesting questions I'm

only for but don't ask me about

the technique I have no idea how to make

transactions free and instant

although I know of course I only have three of my own

ideas

there are also different relictums, the throne with illo

close

I know for sure that we will achieve this

as soon as the blockchain developers stop

playing wars and we will organize synergy
