cosmos cryptography

Legal information

We recommend that you seek legal, financial, tax, technical or other professional advice prior to undertaking any of the above actions. This document is not an exhaustive document that is legally binding, and does not create any legal relationship with you, including, does not contain an offer or an invitation to make offers. This document is for informational purposes only and does not constitute advice or recommendation.

All legal documentation governing interaction between users and the "NFT" digital ecosystem Service is determined by the documentation when registering on the www.itet.pw resource, and no part of this document constitutes other guarantees of compensation for losses, assurances of circumstances or promises compliance with applicable laws.

When using "NFT" ecosystemservices and "NFT" tokens you are solely responsible for compliance with any applicable laws in the jurisdiction of your residence. This document and related documentation may contain legal clauses, disclaimers, representations of circumstances, arbitration clause and limitation of liability that may affect your statutory rights. Before entering into any legal relationship with "NFT, we recommend that you seek professional advice.

The "NFT" token is not an investment, currency, commodity, currency swap, security or other fiat financial instrument. Please note that there are some restrictions on the use of the Service, on participation in the distribution and ownership of "NFT" tokens, if you or your representative are directly or indirectly under the control or control of a person who is recognized as a limited person and/or under any sanctions. "Restricted person" for the purposes of this document means an individual and/or legal entity with citizenship, place of birth, place of residence, location in the United States and Canada, as well as countries subject to UN Security Council sanctions restrictions.

Presentation

We present to your attention a concept that will create unlimited opportunities for development and income for all interested parties. The combination of traditional payment services with blockchain technology can be compared without exaggeration to the Big Bang, as a result of which, according to one of the theories, the Universe arose. And now we are witnessing the emergence of a new coordinate system!

Currently, the blockchain is used in transactions between participants with smart contracts, which provide guarantees of the security of their execution, since it is impossible to substitute and fake data, including the participants. Nevertheless, in contrast to the revolutionary innovation, we have a traditional system of values as a working model. A state-regulated system of payments using a banking card and a telephone, with the need to carry out identification procedures and control settlement participants.
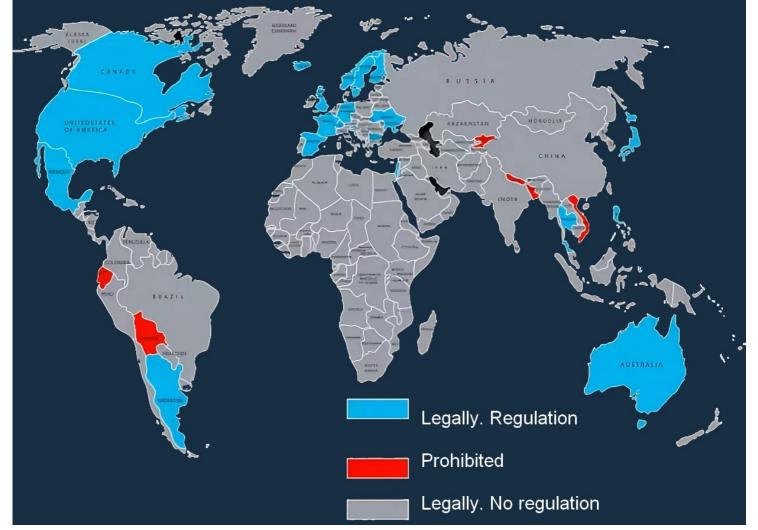

A reasonable question: is it possible a combination, as a result of which, at the intersection of technologies, products and services that can change the familiar world will appear? The answer to this question directly depends on ability to combine the speed and computing power of both technologies.

We cannot even imagine yet what computing power will be available to mankind in 10-20 years. Artificial intelligence provides us with endless possibilities already in the current moment. Within the framework of this document, we will tell interested parties about two unique services, the first of which is implemented within the framework of the traditional practice of settlements; the second one appeared relatively recently, and it is associated with the use of digital financial assets (including cryptocurrencies), which are becoming more and more popular alternative to fiat currencies and classic securities. This document will highlight the "NFT* group of companies representing the "NFT" digital ecosystem, whose services and innovations will be discussed in this document, as well as presenting the products and services that we have managed to create at the intersection of these two in-demand technologies.

It is quite obvious that the current processes associated with the development of blockchain technologies and the market for digital financial assets (including cryptocurrencies) are facing opposition from regulators and their desire to leave the national currency as the only legal tender. But the cryptocurrency market is growing exponentially and its currently growth shows a pace that the internet has.

It follows from this that one cannot but reckon with the new instrument of the market, and it must be grounded. At the first stage of such a grounding of various cryptocurrencies, they need to be integrated into traditional payment services for buying and selling cryptocurrencies on exchanges, with the possibility of withdrawing into fiat money. The next step should be prompted by the market. If cryptocurrencies in the next 10-15 years prove to be an effective and reliable means for payments and settlements, this will be a signal for market participants to use them as one of the main means of payment.

Legally. Regulation

Legally. No regulation

Cryptocurrency market problems

The digital ecosystem "NFT" is finding new ways to invest funds, providing all interested parties with the opportunity to manage their savings in order to generate income in the promising segment of cryptocurrency assets, while ensuring reasonable risks. Cryptocurrencies (or digital financial assets) are completely decentralized, secure digital currencies whose creation is controlled by cryptography.

Cryptocurrency is not issued by central banks, and its value does not depend in any way on the policies of the banks. Unlike conventional currencies, where an issue of new money masses to increase the total money supply can be made, cryptocurrency prices are based solely on supply and demand. Bitcoin, created in 2009, became the first cryptocurrency. There are currently over 8000 alternative cryptocurrencies called altcoins, such as Ethereum, Ripple, and Litecoin.
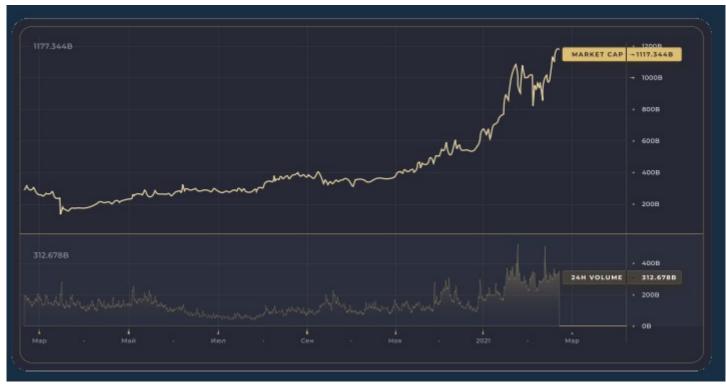

The high volatility of cryptocurrency assets and risks of government exposure create uncertainty in the market and are a warning factor for many potential participants in this market.

However, the interest of an increasing number of investors in the cryptocurrency market is growing every day, and the infrastructure necessary for their effective work does not have time to develop at the required pace.

Services that solve individual user tasks lose their attractiveness due to their narrow focus. In order to perform a typical operation, (purchase of cryptocurrency or exchange of fiat currencies for cryptocurrency) and get the final result (goods in hand or cash fiat money), the client needs to use the services of several companies, each of which will require additional time to complete the transaction, as well as large fees, which increases costs. At the junction of classical and cryptocurrency economies, the problem of developing a single solution has become more urgent than ever.

Aggregate market capitalization of the cryptocurrency market in 2020

The total market capitalization of cryptocurrencies amounted to more than 740 billion dollars as of the end of 2020 (at the beginning of 2020 - about 180 billion dollars), investments in cryptocurrencies and technologies brought the greatest profit in 2020 - 700% of profit for the year.

The share of bitcoin in the cryptocurrency market has updated its annual maximum.

Comparison of market capitalization of leading cryptocurrencies in 2020, in%

Currently, the main task of the digital ecosystem "NFT" is technological development, maintaining a high level of information security and comfortable work for users of the resource. The most important direction is the development and implementation of the tools demanded by the market, which will attract new participants to the platform and ensure a progressive and sustainable growth of both the capitalization of the platform itself and its financial instrument, the "NFT" token.

Solution and about the project

The cryptocurrency market has already grown to such a size that the solution of its problematic issues is possible only in a comprehensive and centralized manner, through accredited platforms that comply with all international security standards and operate within the legal framework.

NFT is a second chance for people who did not buy bitcoin more than 10 years ago, because they did not know about the blockchain.

Let them buy now and wait until the price per piece reaches the bitcoin mark, so the whole planet will get rich.

The token itself will be incinerated and non-replenishable, strictly 21mn. The token will be backed by a series of NFT, which are currently in the final stage of development and which will continue to be actively developed. Part of the income I leave to myself for the construction of a new blockchain, with a central regulator, but without centralization. That is, the crypt is the storage of information on millions of devices, hence the scam, lost wallets and other problems. I will take over the management and centralize the decentralization. As the main dolphin in the shark world, so that there is order while maintaining anonymity. How can this be done? My approach is to divide and delegate. You can only manage effectively until a structure of more than 5-7 people is formed under you. It is considered so, in the books. My experience shows that this number can be expanded to 10-12, if you have certain skills and competencies of the manager. I don't plan to manage everything. I plan to control the built-up system in 5-7, 12, or eventually more - coordinators who are under the house and each of whom is responsible for his own zone.

I know a little bit of everything, a lot of things. But I do not know the law, for example, as my Head of the Lawyers ' Block knows it. I am responsible for the overall operation of the system. Imagine a Tree-I am the trunk. I have branches, branches have thinner branches, branches. They have their own-even thinner and younger. And so on, millions and millions of times. A centralless apparatus of control, not of power. Power is a terrible word. I feel a negative connotation around it. Without proper control of the system can not be. And with a properly constructed control system, the universe thrives.

I will explain and fix the rules of the game, so that they are clear to everyone. First on paper, later in infographics. Plus, as I said, the companies inside COSMOS.. they will have different levels of access to personal personal data. I have reserved top-level access only for myself. Believe me, you have nothing to worry about. No, access is only necessary to act as an arbitrator in the event of a situation that cannot be resolved without me. And do not forget that each holder has the right to vote and it is from the holders that the paths on which Little Red Riding Hood will reach the house to her Grandmother depend.

On my blockchain of the future, it will be possible to invest under a clear growth schedule and fix. For speculators, there will be a snake, the essence of which is either a pure guess-ke, or a manifestation of ingenuity. All the source code will be in the public domain on github, not a drop of lies. There will also be training in Japanese candles, Elliot waves, and anything else I see fit in a playful way. In simple terms, I create a culture of investment in the form of a game. On my exchange, the listing will be free only for those whose projects/ideas I believe in, so that there is no scam and other things, but only reliable and growing projects. I will give a part of the sales of NFT tokens to the copyright holders, freelancers/full-time employees who participated in the work on the tokens. The purpose of these NFT is to show the evolution of graphics, human thinking and concepts through comics, games, etc., as a result of which to connect three generations-X, Y and Z, as it happens, we will make friends with the whole world with crypto.

But this is just the beginning. The additional purpose of the tokens, which is superimposed on the main one, is to accumulate funds for paid listings. At the moment, 80% of crypto projects are nothing more than garbage and scam. The same ether is a scam project. What is the reason?

The fact that Vitalik held the remote control of the world in his hands, but lost everything. Vitalik Buterin is having fun, Elon is having fun, and I can't, I don't want to profit from people. On the markets of this old blockchain, you will see the cosmos cryptography ticker (NFT ticker), and on my exchange, the projects included in the project will be presented separately. This NTF, will not be anywhere else.

On the old exchanges, you used to sell and buy each other with the help of glasses and charts on my exchange, this will not work. You buy from me and sell to me, and I in turn handle pricing, regulation, and all such formalities. This way, the graphs will see what the graphs are without corrections. That is, the asset price and the user are now two different hemispheres. Access to my exchange will not be from the age of 18, so that people can be interested in it at any age. Different access levels will be given depending on the different verification levels. Of the shares, I will issue only the top sectors: crypt, 5g, cannabis, alternative energy and much more. It will turn out in such a way that whatever you buy is all of the highest quality. There will be no shorts, the commission for transactions is 0. You will not be able to send the crypt to a non-existent address, the system simply will not send the money, and you will not lose it.

There will also be punishments - black marks. After 7 such marks, a person is kicked out of space. After two, for example, there will be commissions and so on. These tags can be obtained for cheating, cheating, and so on. In order to protect against theft of funds or fraud, you can file a complaint against the person who stole the money, cheated you, and so on. An arbitrator will respond to the complaint, which will resolve the issue, reveal the truth and transfer the money back to the account of an honest person.

In our application, we will combine all the teams so that they work in synergy. Let's take the best from others, add my own chips and the product will be ready. Later, we are going to create our own ecosystem, which will include the cryptomessenger "One", where like = investment in the author's token, freelance exchange, cafe chain and much more. But I will be honest, even with our efforts, society will not become richer. Inflation will put everything in its place (a reference to Marx's capital). In order for society to really become different, the issue needs to be addressed comprehensively, so I plan to take power into my own hands over all the current heads of state who could not cope without me. This will only be the beginning of a comprehensive global restructuring. All instructions will be on our quantum computer-cosmoscryptography. Xyz.

At the moment, we are making our own operating system – "cosmos edition millennium". After the cosmos cryptography token, there will be a token – my work on the topic of defi, new money that I will provide with meteorites. I'll buy them with the money from the NFT project and everything on the planet at once. 21-22, our shares will go to Nasdaq. COSMOS.. its (CSMS ticker) with a direct listing, as I understand that we are ready. If anyone in my corporation feels a negative emotion, then the crypts are on the account, since the goal is to come to a model where everyone is happy inside the cosmos.

From June - July 2021, businesses are small, medium and large at the beginning, and then monsters will line up to be interviewed and become part of COSMOS… I will not throw out anyone, since the condition for the entry of businesses is a friendly merger with my Intergalactic Transorbital Corporation COSMOS…

– there is no need to deeply understand investments and try to manage asset portfolios;
– there is no need to place deposits in banks at low interest rates. People just need to integrate the "NFT" system into their lives to get all the benefits of working in it;

Ensuring information security and privacy of every user of the digital ecosystem will be the main task for the global "NFT" cryptonetwork. Additional platforms will be created to protect the community. The "NFT" ecosystem will combine the capabilities of global banking network standards and user accessibility, successfully competing in the entire global cryptocurrency sector.

The work plans are to make the digital "NFT" platform an active participant in the exchange of information, the goal of which is to create a full-fledged community and a favorable financial atmosphere for it.

Liqidity

Any investment in cryptocurrency involves financial risk. We cannot guarantee a constant increase in the value of the token, but at the same time we will make it as liquid as possible.
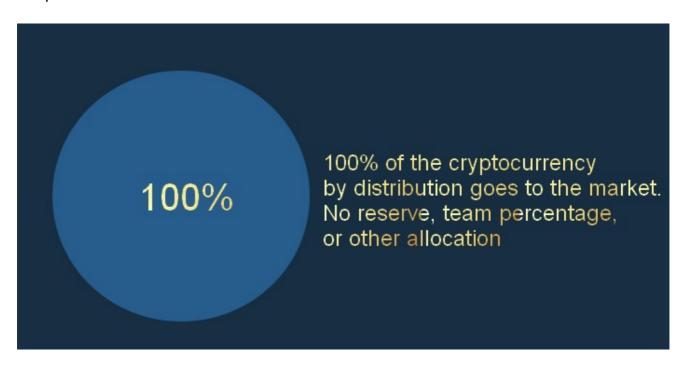

After NFT is added to the exchanges, the project team will put up a certain number of tokens for trading. Trades will be conducted only by traders who are not related to the developers. The NFT token is the main method of calculating the economic part of the project. In general, the economic system of the project includes the active use of the token. We will not use such popular cryptocurrencies as BTC or ETH. Inside the project, only NFT and everything related to it will be used. 3% of the total number of issued tokens will be allocated for the IEO. This amount will be quite enough both for the beginning of the development laid down in the project, and for minimizing the possible reduction in the value of the token.

Cryptocurrency

The NFT token is based on ETH — erc-20. The total issue of the token is 21,000,000. The token is not reissued. The token is verified and located at: https://etherscan.io/token/0x3227aa42b390a6a931a54979f66f27fbfc5fa684

Token Code

```solidity
pragma solidity >=0.4.22 <0.6.0;

interface tokenRecipient {
    function receiveApproval(address _from, uint256 _value, address _token, bytes _extraData) external;
}

contract CosmosCryptography  {
    // Public variables of the token
    string public name;
    string public symbol;
    uint8 public decimals = 18;
    // 18 decimals is the strongly suggested default, avoid changing it
    uint256 public totalSupply;
```

```
// This creates an array with all balances
mapping (address => uint256) public balanceOf;
mapping (address => mapping (address => uint256)) public allowance;

// This generates a public event on the blockchain that will notify clients
event Transfer(address indexed from, address indexed to, uint256 value);

// This generates a public event on the blockchain that will notify clients
event Approval(address indexed _owner, address indexed _spender, uint256 _value);

// This notifies clients about the amount burnt
event Burn(address indexed from, uint256 value);

/**
 * Constructor function
 *
 * Initializes contract with initial supply tokens to the creator of the contract
 */
constructor() public {
    symbol = "";
    name = "";
    decimals = 18;
    totalSupply = ;
    balanceOf[0] = totalSupply;
    emit Transfer(address(0), , totalSupply);                    // Set the symbol for display
purposes
}

Community

One of the top priorities of the "NFT" is to build and expand the ecosystem community. The NFT principles are based on the interest in increasing the number of active community members even higher than in the general growth of the company's capitalization. The main point of fundamental valuation of an asset is precisely the number of real users. Already at the start of its development, the "NFT" digital ecosystem plans to attract the attention of the widest possible community, especially young people interested in the development of modern investments, programming, the development of artificial intelligence, cybergames, music, media space, sports, the recreation industry and leisure.

Road Map

Quarter 1. 2021:
GIFs with sound on the nft exchange; cue ball accelerator.

Quarter 3. 2021:
crypto messenger; a crypto fund broker that does not mediate, but takes
responsibility for the range of crypto and stocks;
two towers in Moscow City; exploration of Antarctica

Quarter 4. 2021:
All at birth a crypto wallet with a balance,
so as not to think about tomorrow

THIS DOCUMENT DOES NOT GIVE PERSONAL, LEGAL OR FINANCIAL ADVICE.
YOU ARE STRONGLY ENCOURAGED TO SEEK YOUR OWN PROFESSIONAL
LEGAL AND FINANCIAL ADVICE.
This white paper (the "whitepaper") is for discussion and information purposes only, provided as a courtesy. The information contained herein is subject to change, no part of this document is legally binding or enforceable, nor is it meant to be, until it has been discussed, reviewed and revised by the board of directors, the board of advisors and company lawyers.

Knowledge required

The purchaser of NFT tokens undertakes that she/he understands and has significant experience of cryptocurrencies, blockchain systems and services, and that she/he fully understands the risks associated with the crowdsale as well as the mechanism related to the use of cryptocurrencies (incl. storage). shall not be responsible for any loss of NFT tokens or situations making it impossible to access NFT tokens, which may result from any actions or omissions of the user or any person undertaking to acquire tokens, as well as in case of hacker attacks.

Important disclaimer

This white paper shall not and cannot be considered as an invitation to enter into an
investment. It does not constitute or relate in any way nor should it be considered as an offering of securities in any jurisdiction. This white paper does not include or contain any information or indication that might be considered as a recommendation or that might be used as a basis for any investment decision.

Regulatory authorities are carefully scrutinizing businesses and operations associated to cryptocurrencies in the world. In that respect, regulatory measures, investigations or actions may impact business and even limit or prevent it from developing its operations in the future.

Any person undertaking to acquire NFT tokens must be aware of the NFT business model, the whitepaper or terms and conditions may change or need to be modified because of new regulatory and compliance requirements from any applicable laws in any jurisdictions.

Representation and warranties

By participating in the Crowdsale, the purchaser agrees to the above and in particular, they represent and warrant that they:

• live in a jurisdiction which allows to sell NFT tokens through a Crowdsale
  without requiring any local authorization;
• are familiar with all related regulations in the specific jurisdiction in which
  they are based and that purchasing cryptographic tokens in that jurisdiction
  is not prohibited, restricted or subject to additional conditions of any kind;

• will not use the Crowdsale for any illegal activity, including but not limited to
  money laundering and the financing of terrorism;

• have sufficient knowledge about the nature of the cryptographic tokens and
  have significant experience with, and functional understanding of, the usage
  and intricacies of dealing with cryptographic tokens and currencies and
  blockchain-based systems and services.

This whitepaper is published with the intent to demonstrate the market needs, alignment to vision and to support growing trends. The leadership team, in conjunction with its partners, do not propose that the material presented in this draft article contains all the needed information for a complete solution nor does it state that all details are listed as part of a complete solution.

This document is in draft form and has not been independently verified. It has been prepared in good faith, with the intent of alignment in solving global process, technical, and industry issues and to open the idea for continued collaboration and discussion with existing or new partners.

NFT cryptocurrency is a utility cryptocurrency. This product is not a digital currency, security, commodity, or any other kind of financial instrument and has not been registered under the Securities Act, the securities laws of any state of the United States or the securities laws of any other country, including the securities laws of any jurisdiction in which a potential token holder is a resident.

NFT cryptocurrency cannot be used for any purposes other than those provided in the whitepaper, including but not limited to, any investment, speculative or other financial purposes. NFT cryptocurrency is not intended for sale or use in any jurisdiction where sale or use of digital tokens may be prohibited.

NFT cryptocurrency confers no other rights in any form, including but not limited to any ownership, distribution (including but not limited to profit), redemption, liquidation, proprietary (including all forms of intellectual property), or other financial or legal rights, other than those specifically described in the whitepaper.

Certain statements, estimates and financial information contained in this whitepaper constitute forward-looking statements or information. Such forward-looking statements or information involve known and unknown risks and uncertainties, which may cause actual events or results to differ materially from the estimates or the results implied or expressed in such forward-looking statements. whitepaper can be modified to provide more detailed information, for correction purposes and continued refinement.
